SESSION NOTES · FALLINGSUN 2026 · @AGENTICANMOL

# How to do anything with AI agents

> If your job happens on a computer, AI will do it better than you. Learn to hire it. Here is how.

## 01 Anatomy of an AI agent

### Anatomy of an AI agent.

**01 Brain**
LLMs · System 2, slow deep thinking
Claude Opus 5.5 · Kimi K3.1 · GPT-6.1 Sol

**02 Eyes**
Vision language models
Gemini · GPT

**03 Ears**
Speech-to-text models
Whisper · Sarvam Saaras V3

**04 Nose**
Decision models · System 1, fast gut calls
Jev 1.14 · GPT-6 Luna Decisions · Perplexity Decider v1.2

**05 Mouth**
Text-to-speech models
ElevenLabs · OpenAI Realtime

**06 Arms**
Tools it uses to act
MCP, computer use, browser use, skills and APIs

**07 Paintbrush**
Image and video generation

Brain thinks · Eyes see · Ears listen · Nose makes fast calls · Mouth talks · Arms do the work · Paintbrush creates.

## 02 The 3 kinds of tools

**AI agents / employees**
Hire them for a job
Grokbot · Dots · Muse · Claude Duet · Hermes · OpenClaw

**AI coding tools**
Your builder
Codex · Claude Code · Antigravity

**Automation tools**
Skip for 99% of things
n8n · Make. One prompt to a coding agent replaces most workflows.

## 03 What to build

IDEA 01 · BUILT LIVE
**Opportunity Hunter Intern**
Finds top opportunities daily and sends cold emails and LinkedIn messages to recruiters.

IDEA 02 · YOUR HOMEWORK
**Instagram Content Intern**
Finds the latest AI news and turns it into carousels for your page.

**Your starter stack. Pick one from each:**
**Browser** Claude (your real Chrome) · Codex in-app browser · Antigravity
**Computer** Claude or Codex computer use
**Tools** Composio · Claude connectors · custom MCP
**Taste** Dribbble · Details. Show it what good looks like before you build.

**Page 2:** the DIRT playbook and your checklist →

# The DIRT playbook

Four steps to build any agent: Dream it, Do it yourself, Record it, Tune it. Get your hands dirty.

## D — Dream it out

Be specific. "I wish I had a job" gets you a dusting job. Write the wish and what counts as done.
**Good wish:** "Search top Y Combinator companies, filter the ones that fit my profile, find their founders, message them my job offer, update me daily."

## I — I do it myself first

Do the job by hand 3 to 5 times. You only learn the real problems and what good looks like by doing it yourself.

## R — Record it as a SKILL.md

Humans have SOPs, automations have workflows, AI agents have SKILL.md: plain-English steps. One example beats ten lines of instructions.

| 01 | 02 | 03 | 04 | 05 |
|---|---|---|---|---|
| **Dream** | **Environment** | **Context** | **Done when** | **Output** |
| What it should do | Browser, tools, logins, taste refs | What you learned by hand + examples | Measurable, countable | What it hands back, when, where |

## T — Tune it daily

Compare output to your "done when". Change **one** thing, run again. Keep going. This is how you end up with AI employees that earn for you.

**Autopilot:** with one clear score, an agent can run ~100 experiments overnight (Karpathy's autoresearch): keep what improves the score, drop the rest.

```
Push this skill to my GitHub and version every change. Set a routine for 8 PM to mail me how the skill performed: did it get me closer to my goal, any errors, anything unexpected? Then suggest improvements I can review.
```

## Your checklist

- [ ] **Today:** write one specific Dream for either idea.
- [ ] **This week:** do the job by hand 3 to 5 times and note what worked.
- [ ] **Then:** turn it into a SKILL.md. Pick your stack. Collect taste references first.
- [ ] **Daily:** run it, change one thing, set the 8 PM report.
- [ ] **Homework:** build the Instagram Content Intern (or any agent) and tag me.

**Surprise gift: homework**
Build the Instagram Content Intern, or any agent. Tag **@agenticanmol** and I will feature you on my Instagram story in front of 86.6K people.
