TRY IT YOURSELF · FALLINGSUN 2026 · @AGENTICANMOL

Build your first AI employee with the DIRT-builder skill

> You type one wish. The skill asks you 6 short questions, writes the agent's instruction file (SKILL.md), runs it, and sets it to improve every day. About 10 minutes. No coding.

STEP 1 Get the skill (pick one method)

METHOD A · EASIEST
Any AI chat
Works everywhere

Open **SKILL.md** from the GitHub link. Copy everything. Paste it as your first message and add your dream under it. Done.

METHOD B
Claude app with Skills
If your plan has Skills

Download **dirt-builder.zip** from the GitHub page. In Claude's settings, open Skills and upload the zip. Then type **/dirt-builder**.

METHOD C
Claude Code / Codex
If you use a terminal

Clone the repo and copy the **dirt-builder** folder into your skills folder (commands below).

```
git clone https://github.com/hash-anmol/dirt-builder.git
mkdir -p ~/.claude/skills && cp -r dirt-builder/dirt-builder ~/.claude/skills/
```

Tip: Claude with a browser connected (your real Chrome) gives the best result for the YC example below, because the agent can open websites and LinkedIn as you. Methods A and B both work with it.

STEP 2 Start with your dream

Write the wish in your own words. Specific beats short. Here is the exact dream I used on stage:

```
/dirt-builder
I wish someone could search for the top companies from Y Combinator. It would then go through all those companies, analyse their current operations and their careers, and filter the relevant companies for my profile. Find their founders, LinkedIn accounts and email IDs, send them connection requests and messages with my job offer, find me a job as a growth marketeer, and update me daily.
```

Using Method A? Paste **SKILL.md**, press enter, then send your dream as a second message.

HOW IT FLOWS What happens next

1
6 questions
One at a time. Each has a Recommended answer. Tap it or type your own.

2
One-screen plan
It shows the full SOP: Task, Environment, Context, Done when, Output.

3
You say "run"
It writes the skill, tests it safely (nothing is sent), then schedules daily runs.

WALKTHROUGH · SAME FLOW AS THE LIVE DEMO

The 6 questions, with my answers

> Copy these answers for the YC example, or swap in your own. If you are unsure, just reply **"you decide"** and it picks the Recommended option for everything left.

1 **Dream: which version of the wish?**
It offers 2 or 3 sharper rewrites. **My pick** Use my own browser, find the companies and founders, and send connection requests. In the evening, check who accepted and message them.

2 **Specific knowledge: where should it look?**
My pick The YC directory plus the job board (Recommended). This is where your own know-how goes: shortcuts, traps, what good looks like.

3 **Environment: where does the agent keep its tracker?**
My pick A Notion database with companies, founders, requests sent and who accepted. A Google Sheet works too. It tells you what to connect, and how long it takes.

4 **Context: what should it copy for tone?**
Paste one real message you would send, in your voice. Examples beat adjectives. Mine was a short 4-bullet note:

```
Hey {name}, I'm {you}. I'll keep this to four bullets.
- What I built, with one number as proof
- The result it got for someone like you
- What I can do for {Company}
- One clear question to answer
Thanks, {you}
```

5 **Done when: what may it do alone, what needs your yes?**
My pick Approve the morning batch, then the agent sends (Recommended). Nothing goes out without your tick.

6 **Output: how do you hear back?**
My pick Notion for the queue and approvals, plus a daily report by Gmail.

Rehearsing first? Say so. I told it this was a dry run, and it switched on **demo mode**: it does everything except the final send click, so no real person gets a test message. Flip the switch when you are ready to go live.

AFTER THE QUESTIONS · RUN IT · TUNE IT

Say "run", then make it better daily

SOP You will see a plan like this

```
# SOP: YC Growth Job Hunter (v0.1.0)
Task: pull YC companies, keep the ones that need growth, find founders,
draft the connection note + DM + email, log it all in Notion.
Environment: your Chrome (LinkedIn + YC signed in), Notion, Gmail.
Context: who you are, your template, rule: one real detail per company.
Done when: 10 companies, each with a founder link and one fit signal.
Nothing sends without your approval. Stops at 10 requests/day.
Output: Notion queue + daily Gmail report.
Schedule: 9 AM draft · 12 PM send approved · 8 PM acceptances + report.
```

Check it. Change anything you want. Then type **run**.

RUN What it does next

- [ ] **Writes the skill first** (a SKILL.md you own), then runs it in demo mode.
- [ ] **Grades itself** against each "Done when" check: passed or failed, with proof.
- [ ] **Sets a daily routine.** It asks before creating anything, and ends each day with a short report.

TUNE Your daily habit (example report)

```
Daily report: YC Growth Job Hunter v0.1.0
Closer to the goal?  yes · 7 of 10 founders found
Done when:           4 of 5 checks passed
Errors:              none
Unexpected:          two companies had no careers page
Suggested change:    search "growth" + "marketing" roles together
```

Read the report, say yes to **one** change, run again. One change at a time shows what actually helped. Ask it to push each version to your GitHub so nothing is lost.

YOUR TURN Dream ideas if you are a student

Internship hunter
Finds new internships in your field every morning and drafts the applications.

Content intern
Finds the latest AI news and turns it into carousels for your page.

Study planner
Turns your syllabus and exam dates into a daily plan with revision reminders.

Stuck, or built something? I could not answer everyone's questions on stage. DM me on Instagram **@agenticanmol**. Post what you built and tag me: I feature the best ones to 86.6K people.
